Leica CloudWorx for AutoCAD
Point cloud plug-in software

Efficient management, viewing and processing of as-built laser scan data for architectural, plant, civil and other 2D & 3D projects.

Leica CloudWorx for AutoCAD is the most efficient and popular plug-in software for using as-built point cloud data directly within AutoCAD.

Users take advantage of the familiar AutoCAD interface and tools to shorten the learning curve for working with laser scan data. Leica CloudWorx along with the powerful Leica Cyclone and JetStream point cloud engines let users efficiently visualize and process large point cloud data sets as part of the traditional design process. By leveraging the accuracy of point cloud data users can create accurate 2D and 3D as-builts, check proposed designs against existing conditions, perform critical construction & fabrication QA, and more... all directly within AutoCAD.

In the past, users often struggled with point cloud manipulation when using AutoCAD point cloud plug-ins. CloudWorx offers this with two powerful options. First, using CloudWorx’s TruSpace viewing window. This intuitive panoramic viewing window lets users better “see” what the point cloud represents, and can drive point cloud visualization within the AutoCAD viewspace. Or, second, connecting to Leica Geosystems’ ultra high-performance JetStream point cloud engine, providing unlimited data for all-the-points, all-the-time for fidelity and finesse in 2D or 3D modeling.

Features and Benefits
- Orthoimage tool to create GeoTIFF, PNG, JPEG, GIF, and BMP images
- Floor Flatness/Floor Levelness tool with auto ASTM1155 standard report
- JetStream Experience allows you to demo the performance of JetStream
- QuickSlice tool lets users quickly slice and orientate the point cloud, aligning the UCS to walls and floors
- Steel, flange, auto pipe, and 2D line fitters – intelligent as-builts
- Auto pipe fit – intelligent, as-builts in AutoPLANT, CADWorx, more
- Auto-Fit Polyline tool lets users quickly fit 2D lines and arc to the point cloud with one or two picks
- Optional Cyclone, JetStream, or ReCap data sources
- Automatic orientation of UCS to point clouds
- User specified points on a grid with SmartPicks
- English, German, Japanese and other languages available

- when it has to be right
Leica CloudWorx for AutoCAD

Control point cloud display
Easy-to-use tools allow a user to quickly define specific areas of interest to display while hiding other portions of a point cloud for improved visualization and comprehension. Quickly work in 2D and 3D by using fences and user-defined cutplanes, slices or 3D limit boxes.

Accurate building documentation
Slices through point cloud data facilitate the creation of planimetric and elevation drawings. 2D lines, polylines, and arcs can be best-fit to provide accurate results. Cross sections of point clouds can also be plotted directly, introducing an entirely new, accurate deliverable and reducing project cycle time.

As-built models
Pipe fitting, steel fitting, and flange fitting tools enable users to create accurate as-built 3D models and pipe runs, best-fit to the point clouds and in conjunction with AutoPLANT, CADWorx, etc. without the labor intensive process of hand modeling each object.

Detailed information for retrofit projects
Engineers can use CloudWorx in retrofit design projects to check for potential interferences with as-built or as-is conditions by leveraging the accuracy and precision of laser scanning. The unparalleled detail provided by point clouds allows engineers to create 2D or 3D designs based on accurate, comprehensive information, providing time and cost savings throughout a project’s various construction phases.

Civil engineering applications
Leica CloudWorx integrates with applications like Autodesk Land Desktop and Civil 3D to deliver solutions for civil engineering projects – such as transportation infrastructure, land development, bridge models and more. Users can extract 3D coordinates to represent site features that are easily identifiable in detailed point clouds. Original ground points can be extracted for topographic modeling.

Available in multiple versions and languages
Leica CloudWorx for AutoCAD is available in Basic and Pro versions and has been localized in multiple languages. See the Leica CloudWorx Technical Specifications document for a complete listing of product specifications.
